

Losing time and money each time you unload? **VIBCO has an efficient and safe solution.**

TRUCK
We're the Vibrator Guys.™

Product Application Bulletin #415 Model DC-900 12V Battery Operated Vibrator

VIBCO'S SOLUTION

A VIBCO DC-900 12 Volt DC Battery Operated Vibrator was mounted to the sloping portion of the V-shaped truck body to prevent material from bridging. The vibrator is operated with a push button from inside the cab - eliminating the need to climb up on the truck during unloading. This provides a much safer, more efficient solution.

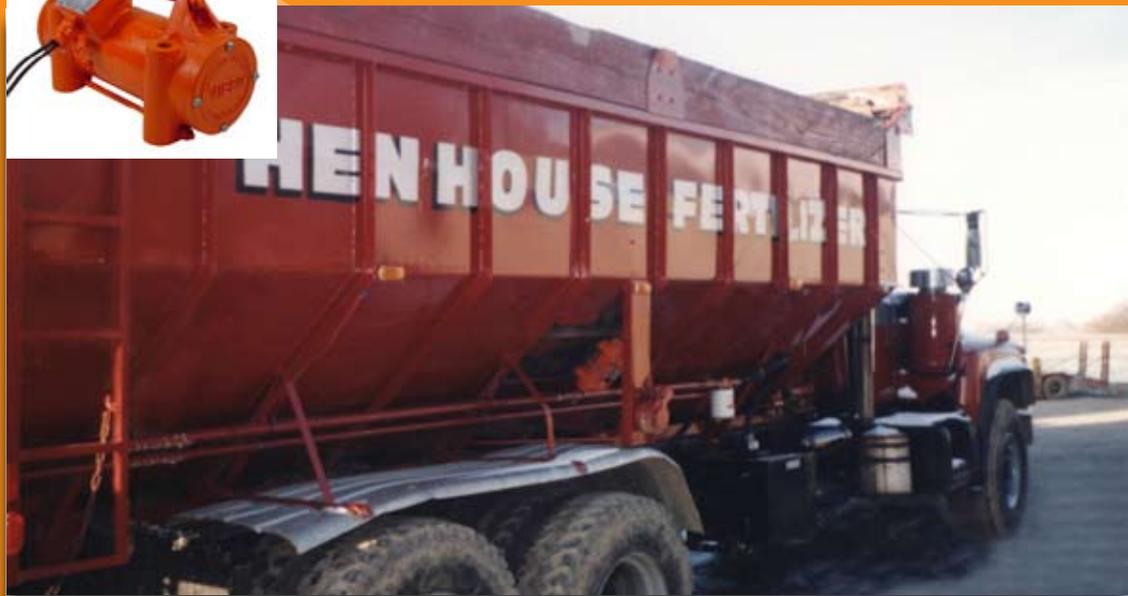

VIBCO'S BENEFITS

After installing the VIBCO DC-900 12V Battery Operated Vibrator, the customer received the following benefits:

- More efficient truck runs, saving a tremendous amount of time
- Accurate and complete load discharges
- Safer unloading with push-button operation from inside the truck cab - no more need to climb up on the truck to bang out the load
- Reduced damage to the trucks from banging

MOBILE VEHICLES

"We used to have to bang on the sides of our trucks...

We were having trouble with material bridging in our fertilizer trucks. The V-shape combined with the consistency of the load was making it very difficult to fully empty them. Every time we tried to discharge a load, someone would end up climbing up on the truck and banging on the sides. The banging worked but it slowed down unloading time, damaged the trucks, and it wasn't safe for anyone to be climbing up there. I talked to my equipment guy and he recommended a VIBCO 12 Volt DC Vibrator for the job. It was easy to install and has made a big difference in our production. Thanks!"
